DEAR HAROLD

DOING A WEISBERG

I HAVE SEVERAL SWATT HAND HELD C.B.S OF WHICH I NO LONGER HAVE ANY NEED FOR SWATTS OF OUTPUT POWER IS THE MAX ANY CB RADIO CAN HAVE SO THESE HAND HELDS WILL PERFORM SAME AS YOUR UNIT THAT I SAW WHEN I WAS THERE ANYWAY. WHAT I AM GETTING AT IS THAT THERE IS A PLUG ON THE SIDE TO PLUG IN AN OUT SIDE ANTANNA WHICH INCREES RADIO PERFORMANCE GREATER THAN SMALL FLEXABLE ANTANNA THAT IS ON RADIO ALREADY ALL I NEED TO DO IS GET AN ~~ADOPTER~~ ADAPTER THAT ~~WILL~~ WILL GO IN THE END OF COAX CABLE THAT IS ON YOUR PRESENT CB IN THE KITCHEN. THIS RADIO HAS 10 AA RECHARGEAL BATTERYS. ~~WHICH~~ WHICH ARE CHARGED WITH A SMALL PLUG IN CHARGER WHEN POWER GOES OFF YOU CAN STILL USE RADIO, AT LEAST UNTIL THEY GO DEAD REMEMBER BATTERY POWERED TRANSCEIVERS USE LOT OF ~~POWER~~ BATTERY WHEN YOU TRANSMIT. NOT MUCH WHEN YOU ARE IN REC MODE. THESE RADIOS ARE VERY SIMPLE TO USE LIL COULD USE IT ~~WITH~~ WITHOUT MUCH PROBLEM. IF THIS WILL WORK FOR YOU LET ME KNOW, AND I WILL GET ONE SENT TO YOU. THEN I WILL CALL YOU ABOUT HOOKUP WHICH SHOULD TAKE ABOUT ~~ONE~~ 2 MINUTES, ANY WAY PLEASE ADVISE THE KEY IS BEING ABLE TO HOOK TO YOUR OUTSIDE ANTANNA

BILL

P.S. THESE WHERE BEST RADIO STACK HAD WHEN I BOUGHT THEM
